SUMMARY

Recent Biology graduate with a Biomedical Engineering minor, research documentation experience, 100 hours of hospital shadowing, and portfolio projects in healthcare data analysis, clinical workflow improvement, EHR-style requirements, and user acceptance testing. Interested in entry-level roles in clinical data coordination, clinical research, healthcare operations, EHR/EMR support, health informatics, quality improvement, and clinical systems analysis.

EDUCATION

Binghamton University, Harpur College of Arts and Sciences - Binghamton, NY 2022 - 2026
Bachelor of Science in Biological Sciences; Minor in Biomedical Engineering
Relevant Coursework: Human Anatomy, Cell Biology and Lab, Tissue Biology and Lab, Biomolecular Processing, Bioprocess Engineering, Electric Circuits, Bioimaging, Biophotonics

PROJECTS

Healthcare Appointment No-Show & EHR Workflow Analysis - Excel, Power BI, SQL Concepts 2026

- Cleaned and analyzed a public healthcare appointment dataset of 110,000+ records to evaluate no-show trends by age group, SMS reminder status, and appointment weekday.
- Built an interactive Power BI dashboard with KPI cards, slicers, and visual reports to summarize appointment completion and no-show patterns.
- Developed mock clinical workflow recommendations, user requirements, and test cases to support reminder tracking, daily no-show follow-up, and EHR-style patient rescheduling workflows.
- Presented findings in a portfolio case study connecting healthcare reporting, data quality, and clinical operations improvement.

Mock EHR Lab Result Follow-Up Workflow Project - Workflow Analysis, Requirements, Testing 2026

- Designed a mock clinical workflow for abnormal lab result follow-up, including current-state and future-state process steps for provider review, patient outreach, and documentation.
- Created sample user requirements, follow-up status fields, and test cases to support safer tracking of unresolved lab results in an EHR-style workflow.
- Mapped potential workflow gaps such as delayed review, unclear ownership, incomplete outreach documentation, and missed escalation points.

Clinical Systems UAT & Patient Intake Testing Project - UAT, Defect Log, Go-Live Checklist 2026

- Created a mock user acceptance testing plan for an EHR patient intake form, including test scenarios, expected results, and pass/fail tracking.
- Built a sample defect log and go-live checklist to document workflow issues, system fixes, training needs, and readiness for implementation.
- Outlined basic system validation steps to confirm required fields, patient information accuracy, form routing, and staff usability before launch.

RESEARCH AND CLINICAL EXPERIENCE

Undergraduate Research Assistant - Automated Robotics & Control Systems Lab, Binghamton University Jun. 2024 - Aug. 2025

- Supported nanoscale systems research, nanowire assembly, device testing, experimental analysis, and documentation of weekly findings.
- Collected, organized, and reviewed experimental data while maintaining accuracy, consistency, and clear research records.
- Used Python, MATLAB, and Microsoft Office to support data processing, analysis, literature review, and presentation of results.
- Communicated progress updates and research findings in a structured format for lab review and project planning.

Clinical Shadowing - Boston Medical Center, Interventional Radiology Apr. 2024 - May 2024

- Completed 100 hours of shadowing in an interventional radiology setting, observing clinical workflows, patient preparation, documentation, and healthcare team communication.
- Gained exposure to image-guided procedures, sterile technique, patient safety practices, and care coordination in a hospital environment.

TEACHING, LEADERSHIP, AND CUSTOMER EXPERIENCE

Introductory Biology Teaching Assistant - Binghamton University Aug. 2024 - Dec. 2025

- Guided students through discussion sections, course projects, and biology concepts while adapting explanations to student needs.
- Provided assignment feedback and collaborated with graduate teaching assistants and lecturers to maintain organized academic support.

Student Organization Leadership - The Women's Network; Alpha Omega Epsilon 2024 - 2026

- Supported student engagement, communication, event promotion, and inclusive programming for campus organizations.

Customer Service Experience - Dunkin', Bath & Body Works, Big Lots 2024 - 2026

- Served customers in fast-paced environments while maintaining accuracy, professionalism, organization, and attention to detail.

SKILLS AND CERTIFICATIONS

Healthcare Systems: EHR/EMR workflow concepts, HIPAA basics, clinical documentation, patient care workflow exposure, user requirements, test cases, UAT, defect logs, workflow analysis, healthcare systems engineering

Data & Reporting: SQL fundamentals, Microsoft Excel, Power BI, dashboard development, data cleaning, KPI reporting, healthcare data analysis, Microsoft Office, Google Suite

Research & Clinical: Data collection, experimental documentation, literature review, medical terminology, interventional radiology exposure, patient communication, accuracy review, laboratory documentation

Technical: Python beginner, MATLAB beginner

Certifications: HIPAA Privacy & Security Basics, SQLBolt SQL Fundamentals, Foundations of Healthcare Systems Engineering, Lean Six Sigma White Belt, Initial Biosafety Training, First Aid/AED, Biomedical Visualization, Programming for Everybody
